

TDM - How To use rotation within the
template editor

Introduction

From version 4.1 and higher it is possible to rotate certain elements within the template editor. This way users have the possibility to display certain elements in a specific angle.

This guide explains how the rotation can be used within the template editor.

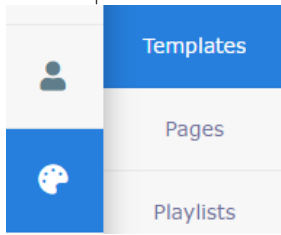

Requirements

If you want to use rotation you need to meet the following requirements:

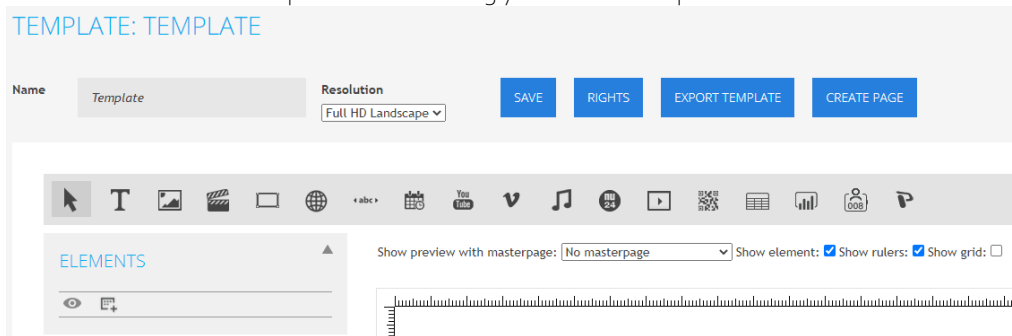

- Have access to the template editor.

How To use rotation within the template editor

1. Please open "Content Creation" from the menu on the left side and select "Templates".

2. Please create or edit a template. This will bring you into the template editor.

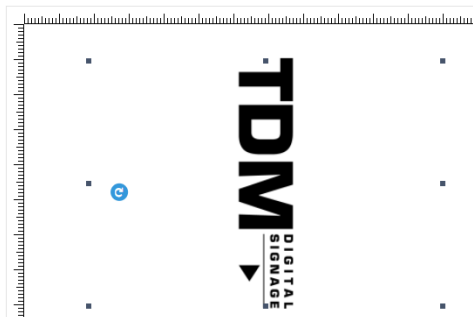

3. Please select an element within the template editor. This can be done by selecting it with a left mouse click:

4. Once the element is selected a blue rotation button will be displayed at the bottom of the element.

5. You need to select the button and should not release it, now you can move your mouse and the image will rotate into that direction.

Once you reach this step you have successfully rotated your element.
