

TDM5 - How To create a power
schedule

Introduction

TDM5 allows you to create schedules for specific times and/or days. A schedule can be linked to content but also to an action like powering off your device. With this functionality you can schedule actions for events or other occasions without having to change the state of the devices manually.

This article will describe how a power schedule can be created.
Additional articles regarding schedules can be found in our knowledge base.

Requirements

If you want to create a power schedule you need to meet the following requirements:

- Have access to: Devices > Schedules.

How To create a power schedule

1. Login to your TDM5 environment.

2. Select "Devices".

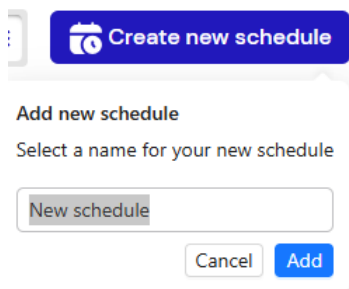

3. Select the menu option called "Schedules"

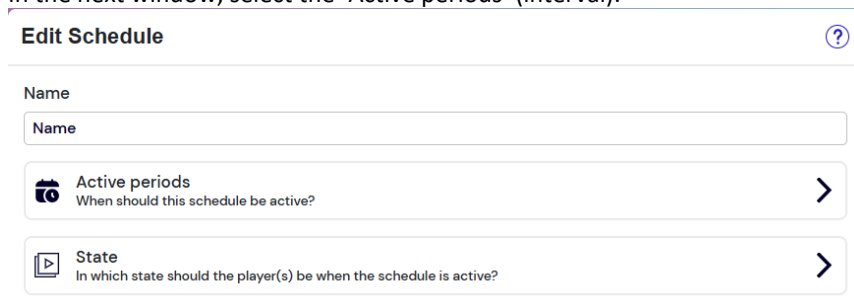

4. Select the option 'Create new schedule' in the top right corner.

Fill in a name for your new schedule and press 'Add'.

5. In the next window, select the 'Active periods' (interval).

For the Active periods, you can choose between once, daily, weekly.

Once
Daily
Weekly

After selecting the interval you can select the preferred time for your power schedule. Please note that the device will be in standby mode once the schedule is active.

Daily:

Daily 07:00 20:00

Weekly:

Weekly Monday 07:00 15:00

Please note:

You can add more intervals if you want to set this for multiple days of the week.

Weekly Tuesday Monday Thursday
Sunday
Wednesday
Friday
Saturday
Daily Add

6. Once the preferred interval has been set, you can set the state of the schedule to 'StandBy' .

StandBy
Content
StandBy
None

7. Select the Player or Group you want to schedule.
