New features

Below an overview of the new features which are part of TDM5.4:

Item:	Function description:
Samsung (Tizen) Player	With the new Samsung Tizen support, you are now able to directly add your Samsung displays to TDM5 and show your content without any additional hardware.
Room Booking	With the new room booking module you will be able to add room booking devices to TDM5, and show booking information in your own personal designs.
Page scheduling	A new page scheduler has been created which gives more options like: Exception dates, days of the month, weekdays of the month etc.
LinkedIn integration	With the new LinkedIn integration you will be able to directly link your business social media account to your content.
Custom weather icons	The 'Open Weather' data source now supports custom weather icons
External display control	It is now possible to control an external display through an Android player. Currently only supported for LG displays
Power on state	An additional state has been added for schedules, with this state it is possible to keep a device turned on during a specific time window.
Airport module	An additional module has been added to retrieve airport information regarding arrivals, departures and baggage belts.
Stability improvements	We have added several stability improvements to our players to make sure they will remain on the foreground.

Precautions and restrictions

Below an overview of the precautions and restrictions of TDM5.4:

Component:	Description:	Status:
Page scheduling	Will become available in a patch after the 5.4 release as we are finalizing the last items for this feature	Will be available ASAP.
Borders for shape element	Will become available in a patch after the 5.4 release as we are finalizing the last items for this feature	Will be available ASAP.
