New features

Below an overview of the new features which are part of TDM5.5:

Item:	Function description:
New Demo Flow	Users can now sign in with their Google or Microsoft account to get started. A demo account is automatically created and configured during the sign-in process, allowing users to explore the platform immediately without any manual setup.
Multi-Select Support	Added support for selecting multiple elements by holding the Ctrl key while clicking items. Multiple selected elements can now be edited simultaneously, making bulk editing faster and more efficient.
Double-Click to Open Items	Introduced double-click functionality across the application. Users can now open items by double-clicking them in lists such as Playlists, Media, Pages, and other supported views, providing a more intuitive navigation experience.
Sorting Options Across All Lists	Added sorting options to list-based views, including Playlists, Media, Pages, and other content libraries. Users can now organize items by relevant properties, making it easier to find and manage content.
Lock Element Position	Added the ability to lock the position of elements to prevent accidental movement while editing. Locked elements remain fully editable, allowing users to modify their content and properties without affecting their placement.

Precautions and restrictions

Below an overview of the precautions and restrictions of TDM5.5:

Component:	Description:	Status:
Device status – Real-time information may remain orange while the device is actually online	Will become available in a patch soon after the 5.5.0 release.	Will be available ASAP.
